

Permian Highway Pipeline Re-Excavations and Right-of-Way Restoration

September 29, 2020

Over the weekend, there was a post on social media regarding two locations on the Permian Highway Pipeline right-of-way where re-excavation activities appeared to be occurring. One of the locations was part of final pipeline integrity testing, and the other involved normal restoration and cleanup activities. Both of these are parts of the standard construction process. These efforts were finished over the weekend at these particular locations but will continue along the pipeline right-of-way as we work to complete this project.
